**De-signing London and other ideas...**

If we could design London we could...  
 We also think Londoners should design more...  
 As well as asking Londoners to propose...

**1. Public Realm and Infrastructure**

- Exercise editorial control over street signs
- create a clean canvas for London's Buildings and control the public realm
- Build infrastructure for recycling and waste
- Build a new infrastructure of planning and real-estate...
- For every road past street, the street lamps & judgment buildings

**2. Urban Intensification**

- Intensify the city's roof tops
- A new built together for all kinds
- Enable infrastructure for self-powered housing

**3. Exploiting the Thames and its environs**

- Increase leisure opportunity on the Thames
- Bring nature to the city
- Recycle is important to increase by 20%...  
 This for food and by education and...  
 Londoners, London rivers (The Fleet, Effra and Tyburn) and...  
 and create wetlands and...  
 lakes for amenity, leisure...  
 access and delight

**4. Housing and Community Need**

- Provide community gardens
- Enable infrastructure for self-powered housing
- Support community land trusts...
- Overall 6.6% of all houses built in London are unoccupied...  
 this percentage is higher than...  
 other UK cities. Even planning...  
 the close to the up empty...  
 commercial property for...  
 residential use...  
 there's no way long able to...
